

Enterprise Network/Security Engineer Capability Guide

Example statements that would indicate a candidate's understanding and competency

Expert – Network Architect

"I am responsible for the architecture of our enterprise firewall deployments. I take customer's business, technical and functional requirements and translate them into technical solutions. I create detailed solution designs for the project team to implement. I am the top internal escalation point for technical deployment issues and provide oversight as required."

Advanced – Senior Network Engineer

"I deploy firewalls as part of a project team. I am responsible for the full configuration of all firewall features, including but not limited to NGIPS, remote access VPNs, web filtering and malware prevention. I provide input to solution design and can create my own designs with guidance from the architects. I provide guidance to the on-site implementation engineers and hold ownership for issue resolution."

Intermediate – Network Engineer

"I deploy firewalls as part of a project team. I am responsible for on-site installation, establishing connectivity to the HQ and troubleshooting basic issues in order to achieve this. I provide assistance for firewall rule changes as required."

Basic – Network Administrator or Field Engineer

"I manage firewall rules and settings based on internal and customer tickets/requests."

"I go to site and physically install firewalls"
